

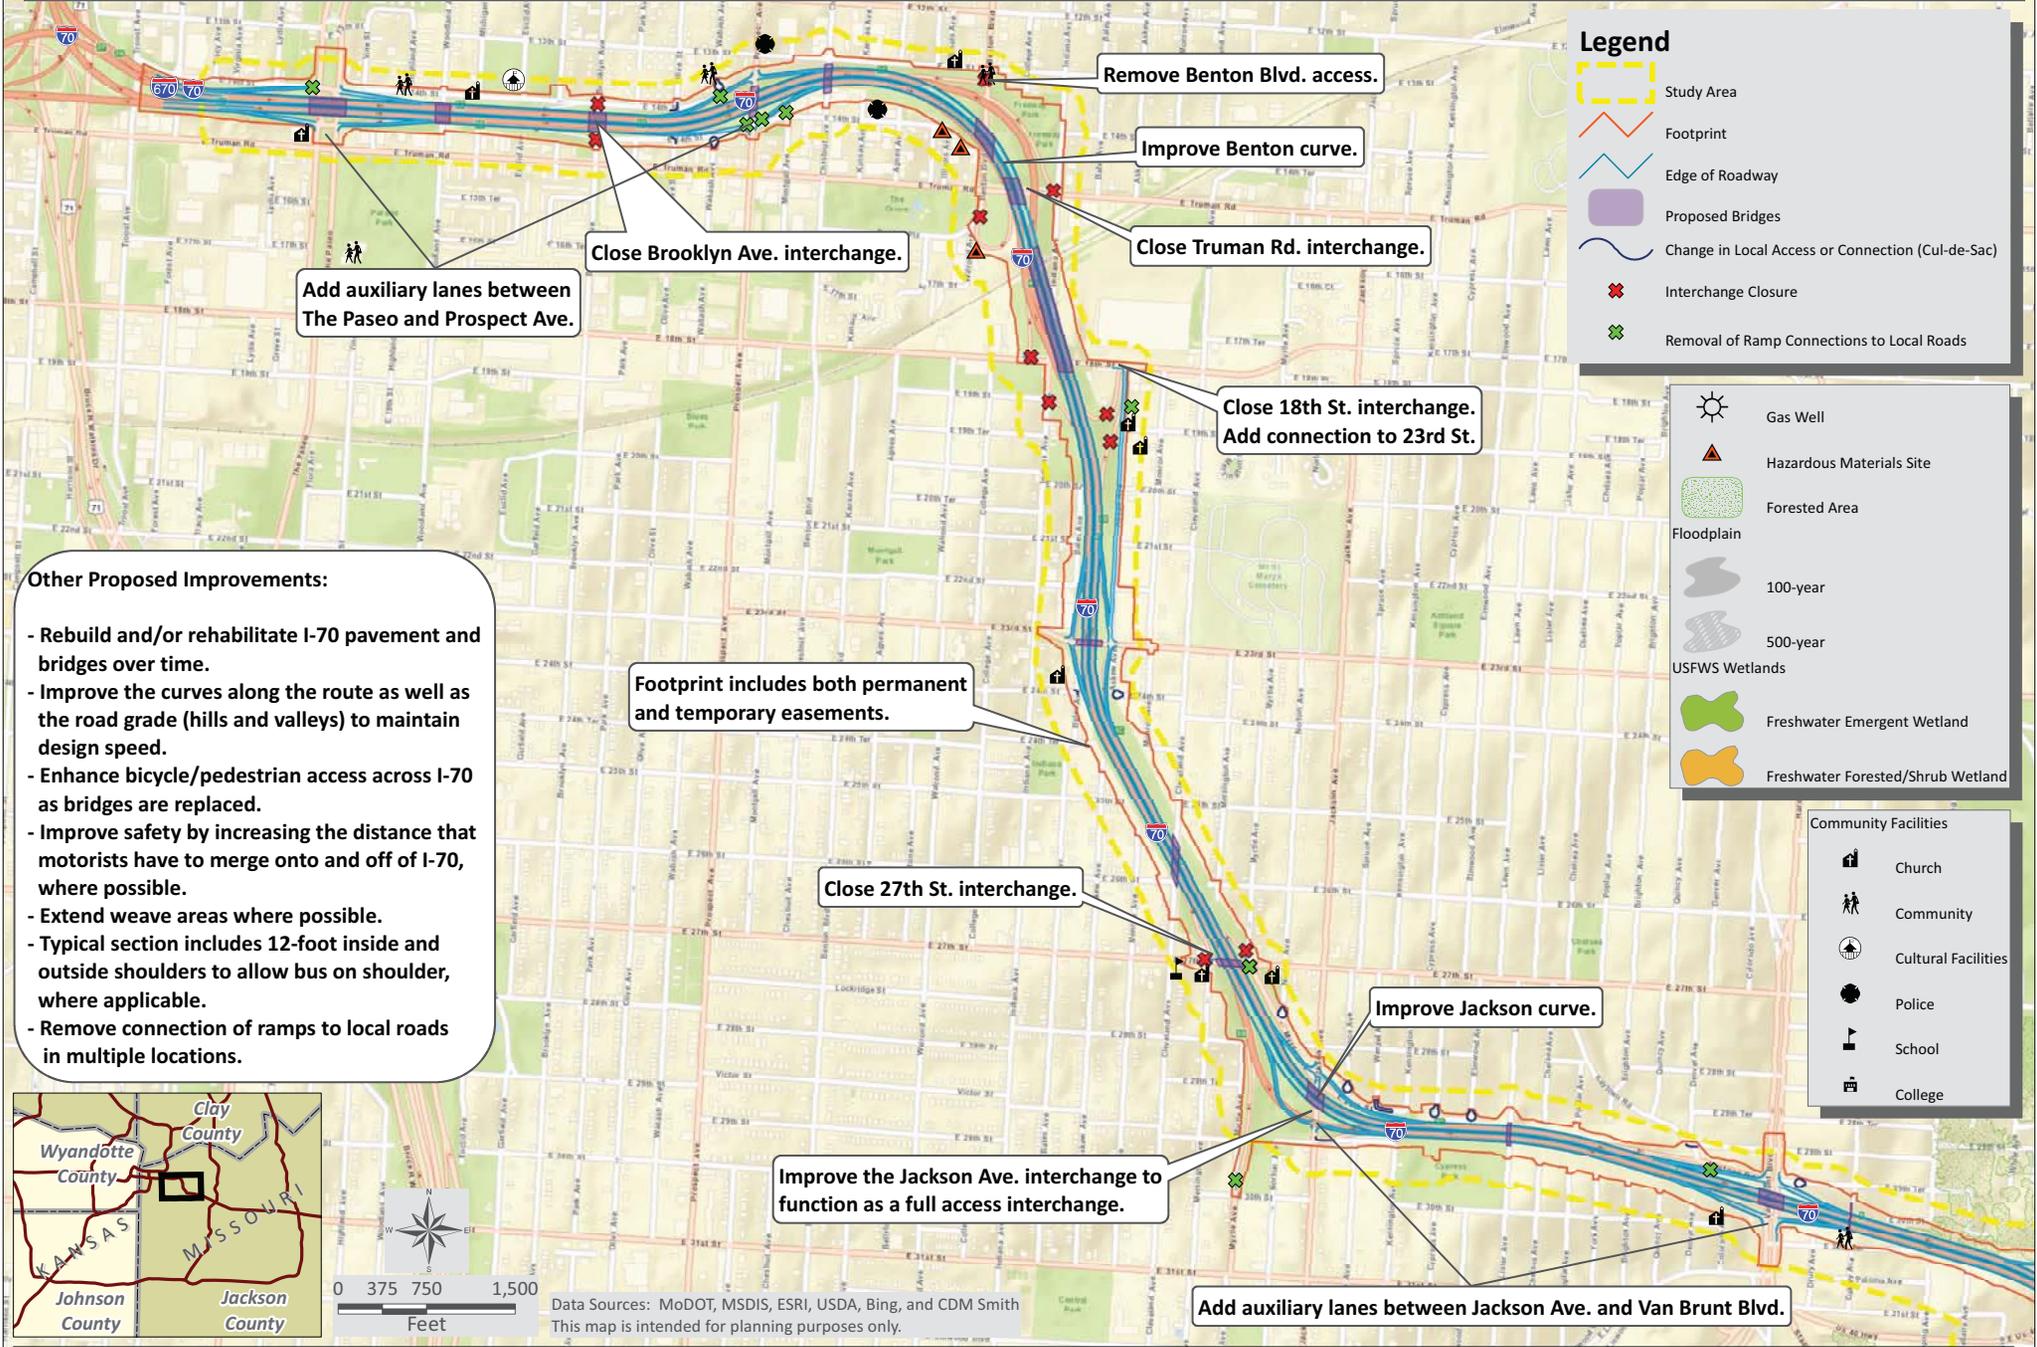

Figure 2-2 Interchange Consolidations Alternative West

Legend

- Study Area
- Footprint
- Edge of Roadway
- Proposed Bridges
- Change in Local Access or Connection (Cul-de-Sac)
- Interchange Closure
- Removal of Ramp Connections to Local Roads

- Gas Well
- Hazardous Materials Site
- Forested Area
- Floodplain
- 100-year
- 500-year
- USFWS Wetlands
- Freshwater Emergent Wetland
- Freshwater Forested/Shrub Wetland

Community Facilities

- Church
- Community
- Cultural Facilities
- Police
- School
- College

Other Proposed Improvements:

- Rebuild and/or rehabilitate I-70 pavement and bridges over time.
- Improve the curves along the route as well as the road grade (hills and valleys) to maintain design speed.
- Enhance bicycle/pedestrian access across I-70 as bridges are replaced.
- Improve safety by increasing the distance that motorists have to merge onto and off of I-70, where possible.
- Extend weave areas where possible.
- Typical section includes 12-foot inside and outside shoulders to allow bus on shoulder, where applicable.
- Remove connection of ramps to local roads in multiple locations.
